WORK EXPERIENCE

Thales

May 2023 – Present

Software Engineer

Melbourne, FL

- Developed and deployed critical software enhancements for Inflight Entertainment and Connectivity (IFEC) products, integrating third party vendor services and extending core system functionality.
- Spearheaded end-to-end support and maintenance of legacy IFEC systems as the primary engineer responsible for root cause analysis, critical bug fixes, and feature development.
- Resolved critical hardware software integration blockers for a 270 aircraft fleet belonging to a flagship global airline in preparation for customer acceptance testing, utilizing extensive log analysis in a physical lab to identify and fix undocumented 3rd party hardware discrepancies.
- Facilitated Agile development cycles as a rotating Scrum Master, leading sprint ceremonies while maintaining transparent and solutions oriented communication with stakeholders during high pressure deployments.
- Partnered with testing teams to unblock system validation, clarifying outdated requirements and diagnosing complex hardware and software root causes.
- Mentored recent graduates as part of Thales's Graduate Program, focusing on ESG project development and presentation to senior leadership.
 - **Stack:** Linux, C++, Python, Java, Bash, Docker, VSCode, Jira, Confluence, Git, Gitlab, CI/CD, Jenkins, Bamboo

Intevations LLC

Sep. 2021 – May 2022

Software Engineer Intern

Fort Myers, FL

- Developed the front end architecture and core features of a Flask based Job Data Analysis tool dedicated to veteran career placement.
- Led requirements gathering initiatives with project sponsors to define project scope and align technical deliverables with stakeholder objectives.
- Architected and maintained CI/CD pipelines to ensure reliable, automated delivery of application updates and maintain code quality.

EDUCATION

Florida Gulf Coast University

May, 2022

BS, Software Engineering

Fort Myers, FL

Honors: Most Impactful Hack (Hackabull 2021) | Engineering Ambassador | Research Day Presenter

PROJECTS

NYC Subway Live Wall Map

github.com/rpsmith77/nyc-subway-map

- Engineered a physical data visualization of the NYC subway by streaming live GTFS-Realtime data from a containerized Python server to an ESP32 microcontroller using WebSockets.
- Developed embedded C++ firmware to manage real time state for over 500 LEDs while implementing persistent WebSocket connection management to ensure system stability and low latency.
 - **Technologies:** C++, Python (Flask), Docker, WebSockets, ESP32, PlatformIO, GTFS-Realtime

WDW Live Info

rpsmith77.github.io/wait_times/

- Developed a responsive web application in React that integrates a centralized REST API to visualize live wait times, show schedules, and dining availability for Walt Disney World theme parks.
 - **Technologies:** React, Javascript, REST API, MUI, GitHub

CERTIFICATIONS, SKILLS & INTERESTS

- **Certification:** [GitLab Certified CI/CD Associate](https://www.gitlab.com/certifications/ci-cd-associate/)
- **Skills:** C++, C, Linux, Embedded Systems Development, Scrum, Python, Shell Scripting, CI/CD, Debugging
- **Interests:** Woodworking, Reading, Audio Animatronics, Storytelling, Creating Effective and Engaging Software
